Stage 1: Problem Definition

- Establish the need for research
  - Quick POV: When do we not need research?

- Define a problem
  - Develop research aim and objectives

Stage 2: Research approach development

- Qualitative research
  - propositions
- Quantitative research
  - hypotheses
- Mixed-methods
- Theoretical framework/ Analytical models

Stage 3: Research design development

- Exploratory research design
- Descriptive research design
- Explanatory or Causal research design

- Reflecting on secondary vs primary information needed
- Link to the population, sample, unit of study, and scope of study.

Stage 4: Fieldwork or data collection

- Data collection instrument development
- Determining sampling process and sample size
- Planning data collection

Stage 5: Data analysis

- Inputting, screening, coding, transcribing, and analysing

Stage 6: Communication of the insights

- Present the findings
- Offer insightful interpretation of the data.

Conclusion

- Market research will help support the decision of management.
- Market research process is iterative but starting with a proper research problem will help guide the rest of the research process.
